

Question Text

Ethical hacking is also known as:
The primary goal of ethical hacking is:
Ethical hackers must always:
Which phase involves gathering information about the target?
Ethical hacking is part of:
A White Hat hacker is:
Black Hat hackers:
Grey Hat hackers:
Script kiddies are:
Hacktivists are motivated by:
Ethical hacking must follow:
Confidentiality means:
Integrity refers to:
Availability ensures:
Ethical hackers must not:
Ethical hacking without permission is:
Cyber laws regulate:
Unauthorized access is considered:
Legal permission is usually documented as:
Violating cyber laws may result in:
The second phase after reconnaissance is:
Exploitation means:
Final phase in ethical hacking is:
Vulnerability is:
Penetration testing simulates:
Responsible disclosure means:
Full disclosure involves:
The purpose of responsible disclosure is:
A vulnerability report should include:
Coordinated disclosure ensures:
Ethical hacking requires:
Malicious hacking aims to:
Ethical hackers work for:
Consent in ethical hacking is:
Ethical hacking improves:
Phishing is:
Social engineering targets:
A firewall is used to:
Encryption ensures:
Malware is:
Testing without scope is:
Scope defines:
NDA stands for:
Data theft is:
Ethical hackers must maintain:
Zero-day vulnerability is:
Bug bounty programs encourage:
Penetration testing tools are used for:
Ethical hackers should follow:
The ultimate goal of ethical hacking is:

Option 1

Illegal hacking
Steal data
Work secretly
Scanning
Cybercrime
Malicious hacker
Follow laws
Always legal
Expert hackers
Money
Personal interest
Data is accurate
Data secrecy
Data is always secret
Document findings
Legal
Hardware
Legal testing
Contract
Rewards
Reporting
Fixing bugs
Hacking
Strength
Real attacks
Public announcement immediately
Private reporting
Fame
Only name
Immediate exposure
Authorization
Protect systems
Criminal groups
Optional
System weakness
Security measure
Machines
Hack systems
Data loss
Security tool
Ethical
Budget
Network Data Access
Legal
Secrecy of vulnerabilities
Known bug
Illegal hacking
Attacking users
Personal ethics only
Break systems

Option 2

Penetration testing
Damage systems
Have permission
Reconnaissance
Cybersecurity
Ethical hacker
Exploit systems illegally
Always illegal
Beginners using tools
Politics or ideology
Legal guidelines
Data is hidden
Data accuracy
Data is always accessible
Misuse data
Illegal
Internet usage and crimes
Cybercrime
Report
Penalties
Scanning
Using vulnerabilities
Reporting
Weakness
Legal audits
Reporting to vendor first
Public release immediately
Prevent misuse
Detailed description
Vendor response time
Exploitation
Harm systems
Organizations
Mandatory
Security posture
Social engineering attack
Humans
Protect networks
Data secrecy
Malicious software
Illegal
Testing boundaries
Non-Disclosure Agreement
Ethical
Transparency with clients
Unknown vulnerability
Responsible reporting
Security assessment
Professional code of conduct
Improve security

Option 3

Phishing
Identify vulnerabilities
Avoid documentation
Exploitation
Networking
Beginner hacker
Report vulnerabilities
Operate between ethical and unethical
Ethical professionals
Learning
Random rules
Data is accessible only to authorized users
Data speed
Data is always deleted
Follow rules
Ethical
Electricity
Ethical behavior
Code
Promotion
Cleaning
Reporting issues
Scanning
Tool
Software design
Selling vulnerabilities
No reporting
Delay fixes
No evidence
Data loss
Secrecy
Improve security
Hackers
Illegal
Vulnerability count
Encryption method
Servers
Delete files
Data duplication
Network device
Recommended
Tools
New Data Analysis
Cybercrime
Illegal access
Fixed issue
Data theft
Data mining
No rules
Steal data

Option 4

Cracking
Hack anonymously
Hide results
Reporting
Programming
Script kiddie
Work for companies
Do not hack
Cyber police
Fun
No rules
Data is deleted
Data duplication
Data is encrypted
Report issues
Safe
Databases only
Debugging
License
Certification
Exploiting
Monitoring systems
Accessing
Program
Data storage
Ignoring issues
Government reporting
Hide bugs
Fake data
System crash
Illegal access
Audit systems
Unknown entities
Ignored
Cybercrime
Firewall
Databases
Store data
Data access
Protocol
Safe
Hackers
Network Defense Act
Testing
Data leaks
Legal flaw
Malware creation
Programming
Illegal practices
Gain fame
